PORTFOLIO

Details and demos can be viewed on my page in **_wijoc.github.io_** ; Here is some apps i have built :

Point of Sales

Github : **github.com/wijoc/Sistem_PoS**

This website-based Point of Sales application is a personal project that originally aimed to help family-owned businesses. This application is built using PHP as programming language with Code Igniter 3 framework, MySQL as rdbms, interfaces using templates AdminLTE with the help of css framework Bootstrap v4.

EVAPOTRANSPIRATION AND EFFECTIVE DISCHARGE PROCESSING APPLICATIONS

This website-based application is a freelance project for a college student. This application aims to help observers process rain data in each watershed into the form of evaporation, transpiration and effective discharge using penman modifications as evapotranspiration calculation method, FJ MOCK and NRECA as effective discharge calculation methods.

MINING OPERATION LICENSE TRACKING AND APPROVAL SISTEM

This application works for approval and tracking permissions processed by internal Department Of Energy and Mineral Resource of Central Java Province, which is also integrated with SIAP Jateng (Central Java service portal and licensing management). Built using PHP 5.6 Procedural and MySQL.

Company Profile Unicoland.com

This app is a freelance project for unicoland.com. Worked on creat a product catalogs for October 2021 as well as creat and deploying website company profiles regarding unicoland.com owned business entities.
Built as static web with bootstrap v5 css framework and template "Gp."
